Hearing - Revised Environmental Criteria for Nordic Ecolabelling of Heat Pumps

Proposed new, revised criteria for Nordic Ecolabelling of heat pumps are now available on Nordic Ecolabels web page www.svanemerket.no. A background document, comment sheet and list of interested parties are also found here.

The proposed environmental criteria are developed by representatives from all the national offices of the Nordic Ecolabel, led by Ola Rise. The most significant changes that are proposed are as follows:

- The product group definition has been modified to include only series manufactured single units
- There are more requirements regarding materials that are used in the heat pump
- The requirements for energy efficiency are made stricter

We would appreciate your comments to our new proposed criteria. The deadline for comments is January 14th 2013. Your comments can be sent to Ola Rise at the Nordic Ecolabel in Norway by e-mail: or@svanemerket.no or mail.

Please contact us if you prefer to receive a paper copy of the documents by mail.

The Nordic Ecolabel will keep records over all comments that we receive. The comments will be available to all interested parties.

Yours sincerely
Ecolabelling Norway
