Appendix 3, Declaration 8, Textile fibres - Viscose

A declaration from the producer of the textile fibre is to be supplied, as part of the documentation required under R9, with applications for a licence regarding Nordic Ecolabelling of supplies for microfibre based cleaning.

Fibre-specific requirements have been established for cotton and other natural cellulosic seed fibres, polyamide, polyester and polypropylene, and viscose.

Product name
Type of textile fibre

Are the fibres derived from recycled materials?*

The term "recycled fibre" refers to fibres won from waste materials from the textile and clothing industry or from post-consumer waste (textiles and similar), as well as to used products that have been collected for recycling.

Does the amount of AOX in the fibres exceed 250 ppm? **Yes** ☐ **No** ☐

Does the sulphur content of the emissions of sulphur compounds (SO_x) to air from the processing during fibre production, expressed as an annual average, exceed 120 g/kg filament fibre produced or 30 g/kg staple fibre produced? **Yes** ☐ **No** ☐

Where both types of fibre are produced on a given site, the overall emissions must not exceed the corresponding weighted average.

Does the emission to water of zinc from the production site during the production of viscose fibre, expressed as an annual average, exceed 0.3 g/kg? **Yes** ☐ **No** ☐
