Appendix 7 Elastane

To be completed by the manufacturer of elastane.

Trade name:_____

Production site:_____

I/we manufacturer(s) of elastane declare:

O8. Are organotin compounds used in elastane production? ☐Yes ☐ No
If yes, state the annual amount?_____

O8. Are emissions to the air of aromatic diisocyanates during polymerisation and spinning less than 5 mg/kg produced fibre, expressed as an annual average? ☐ Yes ☐No

Evaluation & verification: Detailed information and/or analysis reports from elastane manufacturer showing that the requirement is fulfilled.

Attachment:_____

O8. Is N,N - Dimetylacetamide (DMAc, cas no 127-19-5) used in elastane production?
☐ Yes ☐No

If yes, state the annual amount?_____

O27. Are substances added[1] and/or integrated which can have a biocide and/or antibacterial effect? Silver compounds, nano silver and nano gold are also considered antibacterial substances.

☐ Yes ☐ No

If yes, which type of biocide, and how much?_____

[1]*Added substances comprise all chemical products and ingredients of these, including additives (e.g. pigments) in ingredients, but not contaminants from raw material, incl. raw material production. Contaminants are defined as residues from raw material, incl. raw material production present in the finished product in concentrations of less than 100 ppm (0.01 weight %, 100 mg/kg), but not substances that are added to a raw material or product for a purpose, irrespective of quantity.*

Is the fibre dyed? ☐ Yes ☐ No
If yes, the dyes must fulfil chapter 2.4.2.
